

## Task: Hotel List Page (CRUD Form with Responsive UI)

### Frontend Requirements:

**Technology Stack:** ReactJS + Redux (HTML/CSS)

#### 1. Add/Edit Form:

- Fields to include: **(With validation)**
  - **Image:** Upload feature with preview capability.
  - **Title:** Text input for the hotel name.
  - **Description:** Text area for hotel description.
  - **Latitude & Longitude:** Inputs for location coordinates.
  - **Price:** Number input with validation for hotel price.
- **Reuse:** Implement as a single form component for both adding and editing hotel details.

#### 2. List Page with Pagination:

- **Display:**
  - Design a list layout (not a table) to showcase hotel items, using a card layout or similar display format.
  - Each item card should include the hotel image, title, price, and a short description snippet.
- **Features:**
  - **Search & Filters:**
    - Search by **title**.
    - Filter by **price range**.
  - **Pagination:** Display results in paginated format.
  - **Edit & Delete Options:** Provide buttons to edit and delete each list item. Show a success popup upon successful deletion.
  - **Detail Page:**
    - When a list item is clicked, redirect to a detail page.
    - The detail page should display the hotel's full details and show the location on a map using **Geolocation API** and the provided latitude and longitude.
- **SEO Optimization:**
  - Use **React Helmet** for dynamic meta tags.
  - Ensure all images include alt tags for accessibility and SEO benefits.

#### 3. Application Requirements:

- Should be a **Single Page Application (SPA)**.
  - Ensure **reusable components** for form, list items, and pagination.
-

## Backend Requirements:

**Technology Stack:** Node.js with Express

**Database:** PostgreSQL

1. **POST API for Creating New Hotel Records:(With validation)**
    - Endpoint: `POST /api/hotels`
    - Fields:
      - Image, Title, Description, Latitude, Longitude, Price.
    - Store the uploaded image on the Node.js server and save its path in the database.
  2. **Edit API:**
    - Endpoint: `PUT /api/hotels/:id`
    - Allows updating an existing hotel record by ID, including updating the image if needed.
  3. **Delete API:**
    - Endpoint: `DELETE /api/hotels/:id`
    - Deletes a hotel record by ID, with the option to delete the associated image file from the server.
  4. **Get API for Fetching Hotels with Filters:**
    - Endpoint: `GET /api/hotels`
    - Supports search filters:
      - Filter by **title** and **price range**.
      - Pagination support using offset and limit parameters.
- 

## Additional Notes:

- **Native SQL Queries:** Use native SQL queries instead of an ORM for database operations.
- **Server Storage for Images:** Store images on the local Node.js server.

## Sample UI:
